XSPLASH

XSPLASH Travel Budget Calculator

User manual — multi-currency travel budgeting

Version 1.0 · October 2026

What is the Travel Budget Calculator?

Track what you spend on a trip in any currency. Log expenses and income, scan receipts, see everything converted to your main currency and watch simple charts of where the money goes. Data stays on your device. No account, no ads.

1. First steps

1. Open the app and choose your language at the top (10 languages: Nederlands, English, ไทย, Español, Deutsch, Français, Italiano, Português, Polski, 中文).
2. Choose your main display currency and, optionally, two extra display currencies so every total also shows in those.
3. Tap Rates to refresh live exchange rates. The date and time of the last update are shown (“Rates as of …”).
4. Use the sun button to switch between light and dark.

2. Trips

1. Your first trip is called Trip 1. Tap the pencil to rename it, for example “Thailand Nov 2026”.
2. Tap + New trip to start another trip. Each trip has its own transactions, budgets and people.
3. Switch trips with the trip selector.

> Sample trip: Thailand Nov 2026 · Main currency EUR · Extra display currencies THB and USD.

3. Add an expense or income

1. Choose Expense or Income.
2. Pick a category: Transport, Food & drink, Shopping, Wallet/telecom, Hospital, ATM withdrawal, Bank transfer, Investments, Salary/dividend or Other. Tap Manage to add, rename or remove categories.
3. Enter the amount and pick the currency it was paid in. Tap the calculator button to calculate the amount first.
4. Optionally choose the Person who paid.
5. Tap Add. The transaction appears in the list with the amount converted to your main currency.

> Sample entry: Expense · Food & drink · 250 THB · Person: Anna

4. Scan a receipt

1. Tap Take photo to photograph a receipt, or Upload / screenshot to choose an image from your phone.
2. Use Rotate if the picture is sideways.
3. The app reads the text and suggests the amount. Recognition needs internet once to load. Always check the detected amount before you save.
4. Tick Split receipt into multiple categories if one receipt covers different things, for example food and a souvenir.

5. Overview and charts

- OVERVIEW shows total INCOME, EXPENSES and NET in your main currency, with the same totals in your extra display currencies.
- EXPENSES BY CATEGORY shows where the money went.
- WEEKLY TREND shows how spending develops week by week.
- BUDGET PER CATEGORY: set a budget per category with Manage and see how much is left.
- PEOPLE shows the totals per traveller, handy when sharing costs.

6. Filter and search

- Filter the list by category (All categories) or by person (All people).
- Use the bin button next to a transaction to delete it.

7. Export, import and backup

- ⬇ JSON saves a full backup of the trip. Use ⬆ Import to restore it, for example on a new phone.
- ⬇ CSV creates a spreadsheet file you can open in Excel or Google Sheets.
- ⬇ PDF creates a printable report.
- Reset everything deletes all data from this device. This cannot be undone, so export first.

8. Privacy

- All trips and transactions are stored on your device only. XSPLASH cannot see them.
- The app only goes online to fetch exchange rates and, if you use receipt scanning, to load the text recognition component once.
- If you clear the app data or uninstall the app, your data is removed. Make a JSON backup first.
