My Vaccine Card

User manual — a private family vaccination record for travel

Version 1.0 · October 2026

What is My Vaccine Card?

My Vaccine Card keeps the vaccination history of your whole family in one place. Add each vaccine with its date, see when protection ends, and check which vaccines are worth reviewing before a trip. Everything is stored on your own device. There is no account, no advertising and no tracking.

1. First start

1. Open the app. On first start you see an Important notice. Read it, tick the box and tap I ACCEPT, then Continue.
2. The Home tab shows a card for you (the first person, called Me). Use the language button at the top to choose your language.
3. Tap How to use on any screen to see short tips for that screen.

2. Add a vaccine

1. Go to Home and tap Add vaccine.
2. Enter the vaccine name and the date you received it. That is all you need. If the vaccine is in the list, the protection years fill in automatically. You can change them.
3. Not in the list? Just type the name yourself.
4. Optional: note where you got it (for example “City Clinic, Amsterdam”), the batch number and the expiry date. Tap the scan button to read the QR code on the box or certificate and fill these in.
5. Add photos or PDF files of your certificate at the bottom (up to 8 MB each, photos are made smaller to save space).
6. Tap Save.

> Sample entry: Tetanus (Td/Tdap) · Date: 12 March 2024 · Place: City Clinic, Amsterdam · Batch: AB1234 · Person: Anna de Vries.

3. Understand the colours

- Green: up to date, the next dose or booster is far away.
- Orange: due soon or the course is incomplete.
- Red: overdue or expiring soon.
- On a vaccine page, the left ring counts the days to the next dose and the right ring shows how long the protection lasts.
- Multi-dose vaccines, such as Hepatitis B, only give full protection after all doses. Until then the course is shown as incomplete (for example “2 of 3 doses”).

4. People

1. Open the People tab and tap Add person.
2. Only the name is required. Optionally add a birth date, a photo, blood type, allergies and an emergency contact. These are handy when you travel.
3. You can add your own info fields (for example an insurance number) and a free note.
4. Switch person with the selector at the top of Home. Each person has their own vaccines.

> Sample family: Anna de Vries (Me), Lucas de Vries (child), Maria de Vries (grandmother).

5. Travel

1. Open the Travel tab.
2. Pick a person and a destination country.
3. The list shows vaccines to check for that country and whether the person already has them recorded.
4. Tap a missing vaccine to add it. The data is on your phone, so it works without internet.

> The list is guidance only. Always confirm travel requirements with your doctor or a travel clinic.

6. Share and export

- Tap PDF on the Home tab to create a PDF card of the selected person.
- In Settings, use Share summary to create a text summary of the selected person. Copy it, edit it, or send it to a clinic, a doctor or family.
- Custom info fields and the note are added to the summary. You can edit the summary before you send it.

7. Settings

- Language: choose your language. Vaccine names stay in English.
- Theme: Auto follows your phone, or choose Light or Dark.
- Colour: a light blue or a light green background.
- Your own vaccines: add a vaccine that is not in the list and set the years of protection (or tick Lifetime, or No booster recommended). Your own vaccines can be removed with the X.
- Protection table: typical protection per vaccine with the source under each name. Change a number if your doctor says otherwise.

8. Privacy and important notice

- Your data stays on this device. XSPLASH does not receive your vaccination records, photos or personal details.
- The app is a personal record, not official proof of vaccination. Protection durations were checked against CDC, WHO and other health authority guidance in September 2026. Guidance changes, so confirm with your doctor.
- If you clear the app data or uninstall the app, your records are removed from the device. Create a PDF or summary first if you want to keep a copy.
